MARRIOTT INTERNATIONAL

6th October | Quality Engineer | Jagriti Singh | Day 71

SERVICE QUALITY & CUSTOMER EXPERIENCE

Disclaimer: This is an independent educational case study created as part of my "100 Days Quality Management Challenge." Marriott International is a separate organisation. This is not an official Marriott International project, report, collaboration, or representation. The analysis applies general Quality Engineering principles using publicly available information.

QUALITY CHALLENGE

Hospitality involves multiple interconnected service processes: reservations, check-in, room preparation, housekeeping, guest requests, and service recovery. Even when a service process meets its defined standard, variation in service time, process execution, or customer interactions can create inconsistent guest experiences.

Quality Engineering Question: How can service variation be identified, analysed, and controlled to deliver a more consistent guest experience?

QUALITY ENGINEERING TOOLS

VOC	Process Mapping	SPC & Trend	Pareto Analysis	RCA	FMEA	PDCA
Understand guest expectations & feedback	Identify critical service touchpoints	Monitor service time variation	Prioritise recurring service issues	Identify underlying root causes	Anticipate potential service failures	Drive continuous process improvement

PROPOSED QUALITY APPROACH

1. CAPTURE	2. MEASURE	3. ANALYSE	4. PRIORITISE	5. IMPROVE	6. VERIFY	7. STANDARDISE
Guest feedback & service characteristics	Service indicators & issue frequency	Trends & variation across shifts	Pareto Analysis & RCA for major factors	Targeted corrective actions for root causes	Check variation reduction & effectiveness	Sustain & integrate into service processes

EXPECTED QUALITY IMPACT

- ✓ More consistent guest experience
- ✓ Earlier detection of service variation
- ✓ Reduced recurring complaints
- ✓ Better process predictability
- ✓ Improved service reliability
- ✓ Stronger continuous improvement culture

QUALITY TAKEAWAY

"Service quality is not only about meeting a standard. It is about consistently delivering the intended experience across every critical customer touchpoint."

APPLIED QUALITY & TQM TOOLS SUMMARY

- **Voice of Customer (VOC):** Captures guest feedback and expectations.
- **Process Mapping:** Visualises critical touchpoints across service workflows.
- **Statistical Process Control (SPC) & Trend Analysis:** Tracks service time variation.
- **Pareto Analysis (80/20 Rule):** Identifies vital few causes behind complaints.
- **Root Cause Analysis (RCA / 5 Whys):** Uncovers underlying operational issues.
- **Failure Mode and Effects Analysis (FMEA):** Mitigates potential process failures.
- **PDCA Cycle (Plan-Do-Check-Act):** Ensures continuous, structured process improvement.
- **Standardisation (SOPs):** Locks in operational gains and sustains quality standards.
